

# Python, create a Web (HTTP) server

<https://flaviocopes.com/python-http-server/>

Python makes it super easy to create an HTTP server, via the `http` module of the standard library.

In particular, the `http.server` object is the thing we're going to use.

First, I want to mention one quick way to run an HTTP server from any folder, without writing any code:

```
python -m http.server --cgi 8000
```
